

LEACHATE COLLECTION (Disposal Operations)

Liquid (leachate) from refuse and storm events migrates through refuse to base of liner
1

Leachate reaches main lines and is transported to double-walled underground storage tank (UST)
2

Leachate is pumped daily from the UST to two aboveground storage tanks (ASTs)
3

Leachate from AST is transferred to a water truck as needed
4

Leachate is applied to landfill tip area face (lined area only)
5

Process Map Number DO-1.6 (Rev 2)
